

Auditdata

Auditdata Measure

Portfolio of Audiological Solutions

Empowering people living with hearing impairment begins with efficient and accurate testing and fitting. Auditdata Measure is a suite of audiological equipment that connects to a modular, PC-based clinical measurement software system.

Best Care Experience

Improving quality of life by enabling the best care experience for all

Pre-clinic

Auditdata aims to close the hearing impairment gap by providing the tools to facilitate smooth and accurate screenings. A seamless journey from booking to fitting, Auditdata helps manage appointments and optimize resources from the beginning.

In-clinic

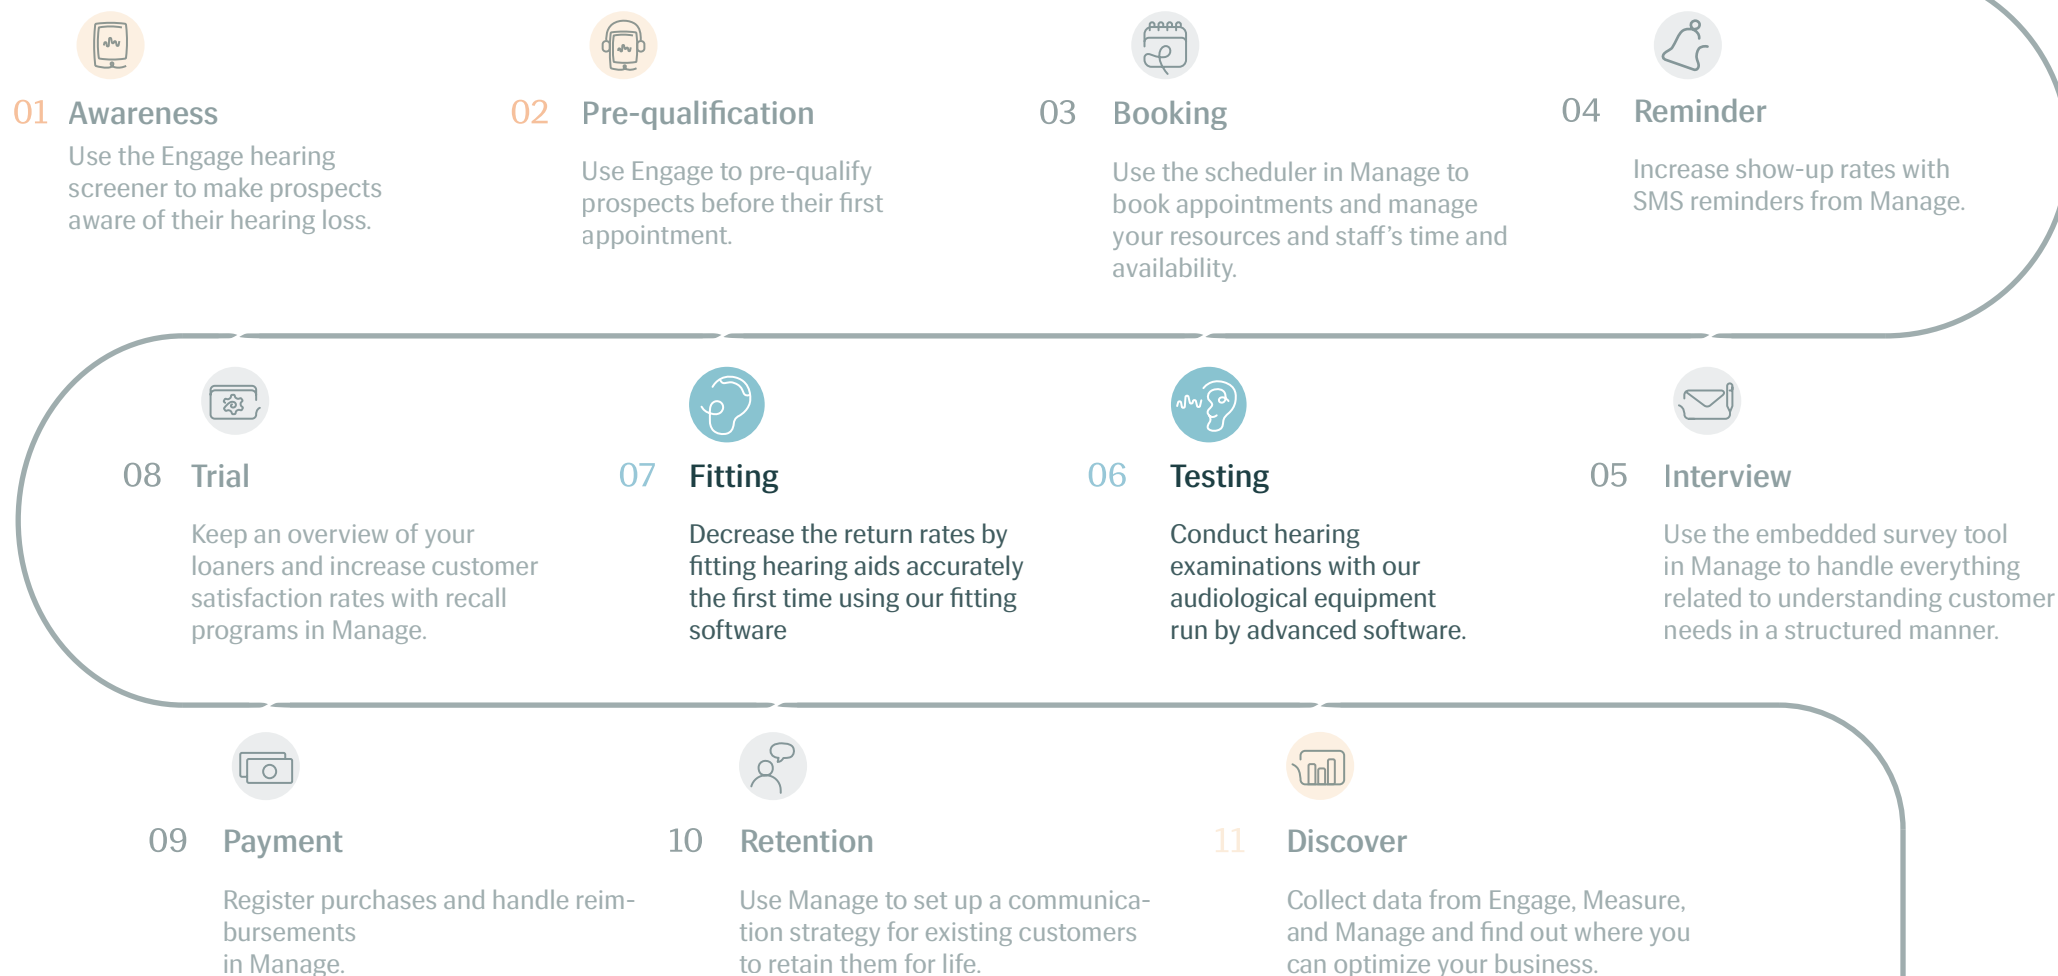

Auditdata empowers more meaningful face time with patients. Our software and hardware utilize data and AI to enable more effective and accurate detection, as well as streamline and optimize administration for more elevated patient care.

Aftercare

Auditdata's structured protocol of follow-ups, birthday reminders, and easy integration with marketing tools transform tedious tasks into a smooth routine to meet best care standards and minimize returns.

Hearing Care Journey

Auditdata Measure is a suite of audiological equipment empowering people living with hearing impairment with efficient and accurate testing and fitting.

Measure

Bridging the gap between detection and treatment, Measure enables clear testing, consistent workflows, and a comfortable patient experience. Measure enables audiologists and clinics to monitor and streamline workflows—resulting in increased customer satisfaction and decreased rates of return.

NEW

Introducing Our Wireless REM Probe

We're proud to introduce Auditdata's first, but certainly not the last wireless item, the **Measure Wireless REM Probe**.

More Comfort

Enhance comfort for both patients and clinicians by eliminating the restrictions and discomfort associated with wired systems.

Same Accuracy

Maintain the same level of accuracy as before, ensuring that hearing aid fittings remain precise and effective.

Easy Set Up

With a one-click connection, there's no fuss over adjusting cables on patients, streamlining appointments and enhancing efficiency in patient care.

| Diagnostic Audiometer & Fitting Unit

Well-crafted **Hardware** with **Minimal** Wires

Stackable Design

Our new audiometer is stackable and sits perfectly on top or below the loudspeaker, optimizing your clinic's layout.

Portable

Our audiometer effortlessly slips into a standard laptop-bag, enabling seamless mobility with USB-powered functionality.

Wireless Capabilities

The new Measure audiometer and fitting unit offers easy setup, great cable handling, and wireless Real Ear Measurements.

| Measure Software

Seamless Clinical Workflows Powered by Integrated Software

Provide Consistent Quality with Clinical Workflows

Streamline daily clinical processes with Measure Software, enabling consistent, high-quality customer service. Clinical workflows make it possible to create and customize working methods to suit individual clinic needs.

Notification Alerts to Drive Positive Decisions During Testing

Track and deliver exceptional care with confidence, supported by visual notifications and reminders in Measure Software. Audiologists are encouraged to take immediate action, resulting in a solid starting point for effective hearing interventions.

Effortless Customization and Seamless Distributions

Configure any number of units with a click of a button via our cloud service, eliminating tedious manual configurations. Tailor the software to ensure consistency and efficiency across all your clinics and devices.

| In-Clinic Solutions

Enable **Accurate, Assured** Hearing Assessments and Fittings

The tools themselves are not enough to provide the best care experience. Hearing healthcare consumers expect modern technology and high customer service.

With Auditdata Measure, hearing care professionals and patients can trust their results and make qualified decisions in their patients' hearing care journeys. Stable and secure software and hardware give confidence in clinical quality, so they can deliver care back to patients.

Feature highlight

Business of hearing, the service of listening

Closing the hearing impairment gap begins with accurate testing and fittings. With Auditdata Measure, you can ensure precise evaluations and enable better fitting hearing instruments.

Hearing assessments

Auditdata's hearing assessment suite combines cutting-edge hardware with sophisticated software to empower more accurate, reliable testing setups.

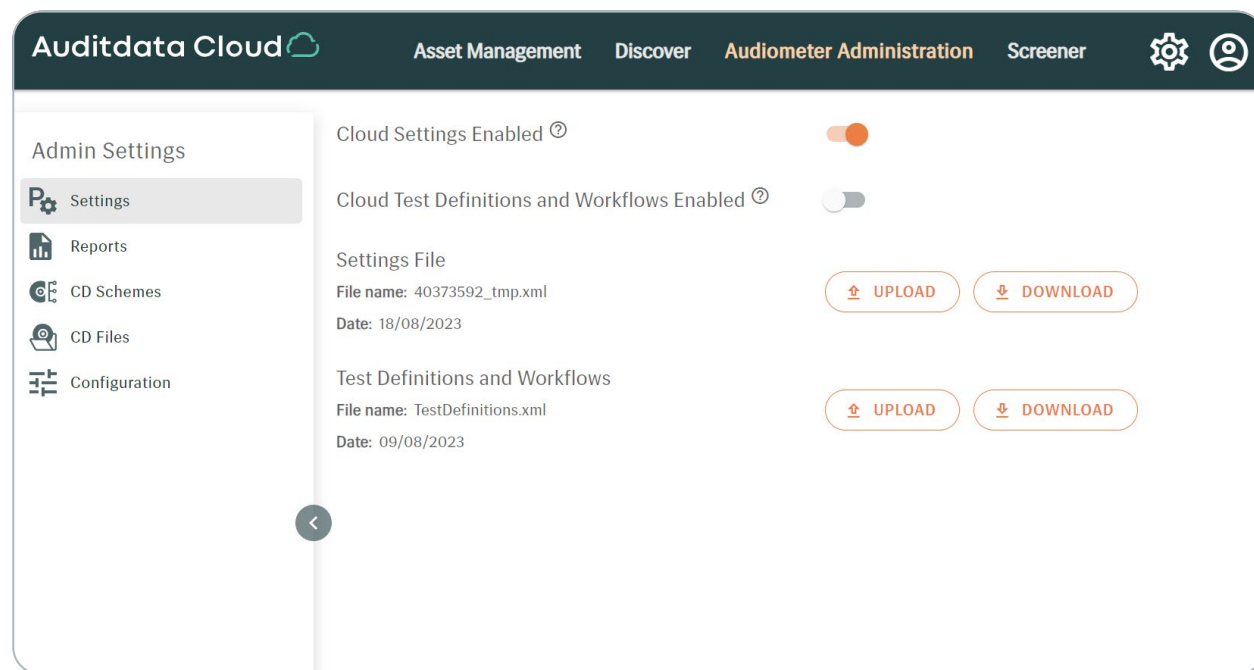

- Pure-tone audiometry
- Otoscopy
- Immittance

Hearing instrument fitting

Our hearing instrument fitting solution is designed to provide a best care experience for patients that reduces your clinic's hearing aid returns.

- Real ear measurement (REM)
- Speech mapping
- Hearing instrument testing

Effortless Customization and Seamless Distributions

Unleash the power of seamless settings distribution, custom clinical workflow configurations, and comprehensive test definitions through Auditdata Cloud. Centralize your audiology operations for unprecedented consistency and efficiency.

| In-Clinic Services

No Clinic **Downtime** with **Calibration SWAP** Service

| Feature highlight

Hassle-free transducer **SWAP** service and expert support

Calibration **SWAP** service

Our innovative system stores the calibration information in the plug. This means all you have to do to get your system calibrated is to plug in a new set of earphones or probes. No hassle, no downtime.

With **Auditdata's Asset Management cloud service** you can keep an overview of all your transducers and their calibration status. In the Asset Management Cloud, you can view and check transducer type, serial number, their location and IP location, latest calibration data and number of days until calibration.

Keeping track of your transducers in the Auditdata Cloud means that you can easily **plan your calibration SWAP** and be prepared for Audits.

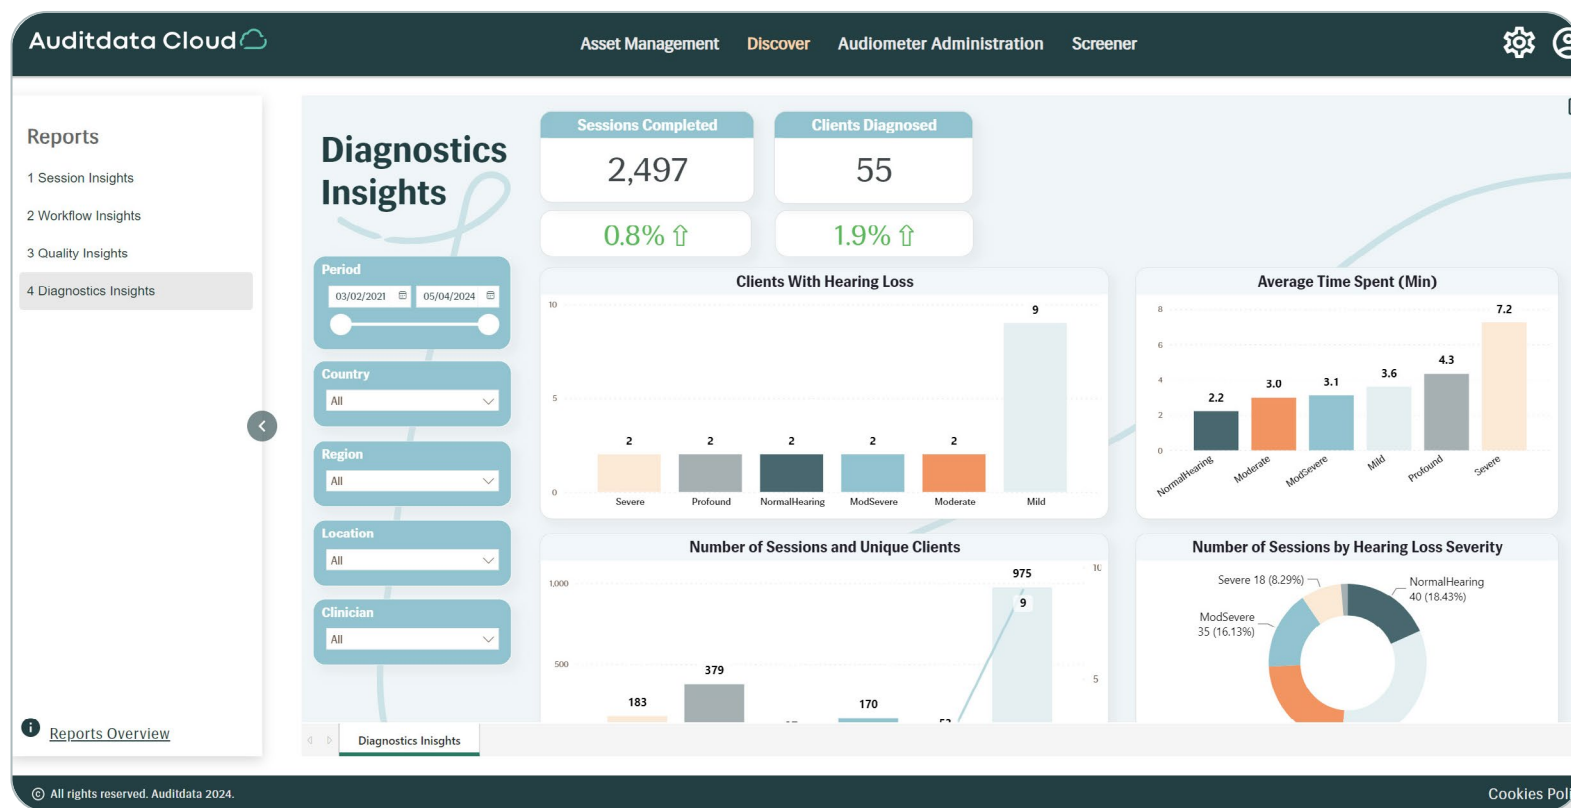

Asset Management

Get a comprehensive overview of your transducers and other equipment to stay in control and optimize their performance.

- Equipment status overview
- Calibration needs
- Equipment utilization
- Equipment performance trends
- Equipment maintenance history

Clinical Reporting

Clinical Reports that Facilitate **Impactful, Proactive** Care

Auditdata Measure's clinical reports empower hearing care professionals with the knowledge that makes the difference. Get session analytics to identify patterns and trends in patient testing, and analyze warnings like consistency issues and frequency gaps to drive improvements in care protocols.

Feature highlight

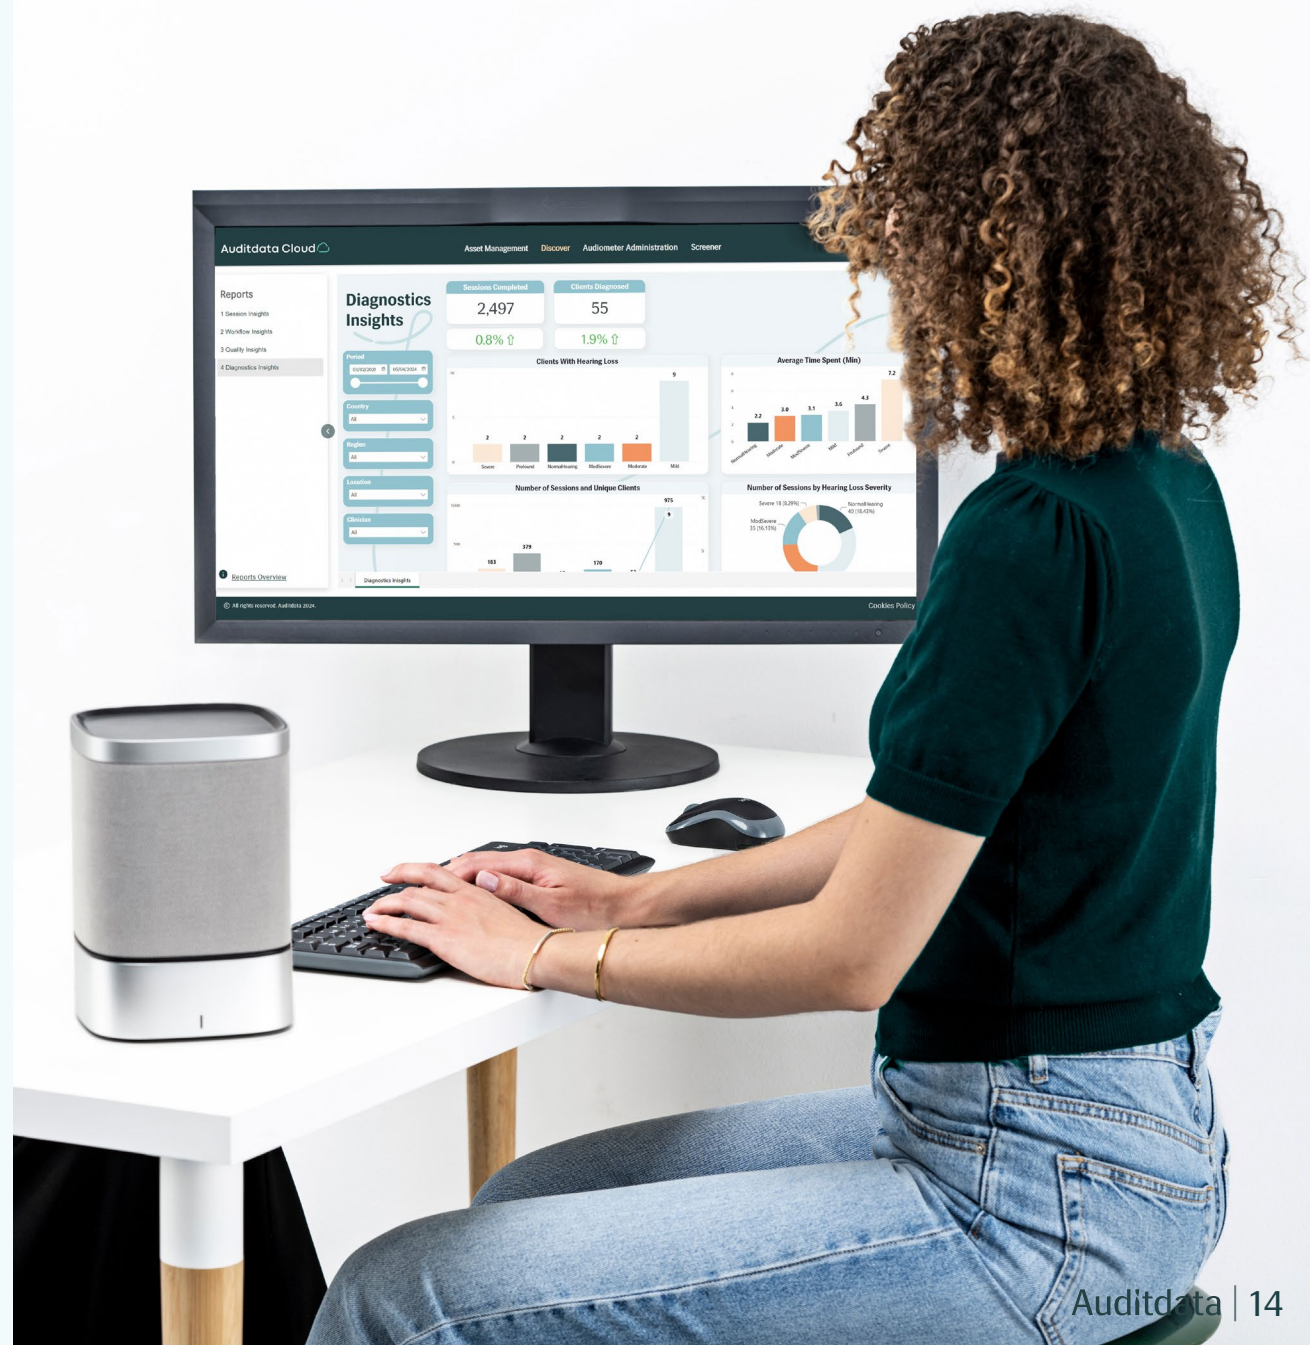

Unlock clinical insights for the best care experience

We understand the importance of delivering the best care experience to your patients. Our powerful clinical reporting tools provide invaluable insights that improve patient outcomes and streamline your workflow.

Clinical insights

Get equipped with the knowledge you need to make informed decisions and provide exceptional care to your patients.

- Session analytics
- Hearing loss analysis
- Hearing aid type
- Quality assessment
- Workflow overview and step insights

| Training and Support

| The Auditdata Suite

Connected Set of Software, Hardware, and Services

When used together, the full Auditdata suite—Engage, Measure, Manage, and Discover—enable you to share patient history across the hearing journey to improve individual care. Find what works, then scale your knowledge across locations and for compounded benefits.

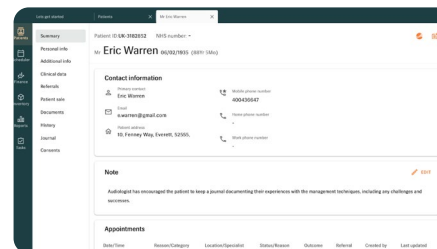

Engage

An audiology self-screening solution that enables hearing care professionals to engage with potential customers and qualify valuable leads earlier.

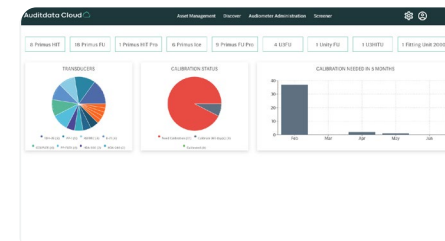

Measure

Enable clear testing, consistent workflows, and a comfortable patient experience with Measure's suite of audiological equipment and software.

Manage

Focus on what matters with Manage's market-leading and fully cloud-based, data-driven practice management software built for the audiology industry.

Discover

Fuel informed care with rich business and consumer insights with Discover, powered by Microsoft Power BI and embedded in the Auditdata cloud.

What Our Customers Are Saying

Some of our customers

WSAudiology

bloom[™]
hearing specialists

sonova
HEAR THE WORLD

Specsavers[®]

HOORCENTRUM AERTS
DE HOORSPECIALIST

“We use a clinical process or workflow to give the best quality to every client that comes in, and to ensure the same high quality across all clinics and employees. No matter which hearing center a customer visits, they will start at the same point, go through the same journey, and will end up with the best possible hearing solutions to meet their specific needs.”

Frank Morgan,
Audiologist and Quality Manager, Hoorcentrum Aerts

SONAIRE

“It’s not just about the technology being user-friendly—it’s about how it integrates into our daily operations. Data updates are immediate, and the system calibration is extremely fast, which means less waiting time and more direct care with patients.”

Erika Saldarriaga,
Speech Therapist and Audiologist,
Sonaire Centro Auditivo

“Now, with Auditdata and its SWAP calibration service, we can run our audiology courses over the summer, as well as during the school year, which means we can increase the number of students that take our classes. The SWAP calibration is a great option and a great plus for us.”

Antonio Giulio Specchia,
Program Lead & Coordinator, South Devon College

Ready to Enable the **Best Care** Experience?

Since 1992, Auditdata has connected the customer journey and provided professionals with the hardware, software, and services needed to enhance treatment at every touchpoint. Whether elevating accuracy in clinical testing or empowering better conversations with patients—Auditdata solutions enable the knowledge and compassion that make the difference across the pre-clinic, in-clinic, and aftercare journey.
